

## **Nroho: Minimum Viable Product requirements.**

This document will summarize the discussion that was held in Nroho's weekly meeting 9 April 2025.

The point system was done according to the explicit opinion on the feature during the meeting.

### **Highly Agreed Features (9-10/10):**

#### **1. Ride Request Feature (posting requests) – 10/10**

- The whole team agreed on it, unanimously. It has several advantages, but most importantly creating a constant movement in the application.

#### **2. Chat functionality (in-app) – 9/10**

- Strongly supported by all the team (except Younes). Younes saw its value but deferred to V2. However after some reading and thinking, Younes changed his mind (under some conditions)

#### **3. Security and Tracking (ETA / Ride tracking) – 9/10**

- Everyone saw its necessity, the feature includes ride tracking, a basic system for KYC (Even if manually with a simple model to detect if it's a card).

#### **4. Basic UI improvements – 7/10**

- Everyone saw its necessity. Need a clear KPI to proceed with the discussion.

### **Medium Agreed Features (5-8/10):**

#### **1. Data Management and B2B features – 6/10**

- Younes strongly emphasized importance, disappointment noted about oversight by others. Recognized as necessary, but only one or two explicitly stated support during the meeting.

**2. Booking/Sharing ride with friends (single request for multiple riders)  
– 8/10**

- Strongly supported by Khadidja, Amel, and Meriem, noted as priority by Khadidja. Generally agreed as a good idea, though some explicit opposition from Younes to include this in the V1.

**3. Sharing link of the Ride for drivers – 7/10**

- Noted as a good idea that might increase the use of the App in the early stage.
